```python
starting_bid= int(20)
bid=int(input("What would you like to bid?"))
while True:
    if (int(bid))>(int(starting_bid)):
        print("You have won the auction")
        break
    else:
        bid=input("Bid is too low what would you like to bid?")
print ("Congrats you have won the auction payment is expected in 24 hours!")
```

```python
num=int(input("Give me your grade!"))
if num in range(90,101):
    print("A")
elif num in range(80,90):
    print("B")
elif num in range(70,80):
    print("C")
elif num in range(60,70):
    print("D")
elif num in range(0,61):
    print("F")
else:
    print ("idk wtf you did")
```
